

THE MEDICAL AID INTERNATIONAL EMERGENCY BAG, DESIGNED FOR THE REALITIES OF LMICS

Based on our extensive experience of working in the LMIC environment this Emergency Bag enables all age ranges to be treated and covers the patients' needs on an airway, breathing, circulation basis as well as making sure the responder can be seen and also see what they are doing.

- Reusable BVM, adult, child, neonate with full range of reusable masks
- Finger pulse oximeter
- Airways 000-6 x 5
- Nasal airways 6,7,8,9 x 3
- Tough cut scissors
- Headtorch
- Stethoscope
- Fluorescent vests X 4
- Gloves X 10 pairs
- SAM splint X 1
- Ambulance dressings x 2
- Crepe bandages x 6
- Safety pins and adhesive tape

"I was working one day in a new paediatric operating room that we had just finished commissioning and we were doing our first case. Suddenly a nurse ran in and asked if anyone had a breathing bag for a child that had just been delivered by C section who was not breathing.

I grabbed our emergency bag and rushed in and, using our neonatal BVM started to breathe for the baby. Forty five seconds later she started to breathe on her own; a life saved. Without the availability of the BVM she would not have survived."
