- Skin Graft

Suction

- Solution in a box – crated and easy to transport
- Includes the MAI operating table with attachments
- All equipment designed for the LMIC environment
- Suitable for all ages – neonatal up to adult
- Operational in two hours
- Contact us now to discuss options that suit your specific requirements
- Price on application

DELIVERING THE COMPLETE SURGICAL SOLUTION

Delivered crated with all accessories, operational two hours from arrival and includes two FREE Online Biomedical Engineering Courses including toolkits and text books

The need to upgrade operating rooms in LMICs has never been so great and is universally recognised. Data from a recent study of 50 Biomedical Engineers – available at <https://medaidacademy.co.uk/biomedical-engineering/the-effectiveness-of-the-biomedical-engineering-course-50-students/> – who had completed our online Biomedical Engineering Training package ranked the operating room related units as most useful by a very significant margin. It is reasonable to draw a link between this fact and the urgent need to improve operating department facilities in LMICs.

This solution is straightforward and will transform patient care, help retain and recruit staff, and be a major factor in context appropriate capacity building.
